2010 RESULTS

- **90 million square feet** committed to maintaining a sustained reduction in the use of non-essential electricity.
- This equates to **350,000 kilowatt hours** or **\$35,000 saved** over this past weekend.
- **Annualized**, this would be **42,800,000 kilowatt hours** or **\$4.3 million** – enough **electricity** to **power 3,140 average Texas homes** for a year.
- At a time when companies are looking for ways to save money, conservation may be the simplest solution yet.
